Willing to travel & possess own transport

PROFESSIONAL SUMMARY

Cybersecurity-focused IT graduate with a Bachelor's in Computer Science and hands-on penetration testing experience in enterprise network environments. Proven ability to identify and resolve critical system vulnerabilities using industry-standard tools (Metasploit, BurpSuite, Kali Linux). Combines strong technical diagnostic skills with essential business communication, interpersonal and social skills, creative problem-solving and analytical thinking—all honed through high-pressure customer-facing roles. Demonstrates a positive mindset and strong work ethics, fully committed to a structured cybersecurity career pathway through intensive training and placement.

TECHNICAL SKILLS

Cybersecurity: Penetration Testing, Vulnerability Assessment, Risk Assessment, Network Security, Incident Response, Intrusion Detection, Firewall Configuration, Threat Detection & Analysis, Ethical Hacking.

Technical Skills: Kali Linux, Arch Linux, Virtualbox, QEMU/KVM, Metasploit Framework, BurpSuite, Nmap, John The Ripper, Wireshark, pfSense, Python, Django, SQL, MySQL, SQLite, HTML, CSS.

IT Operations: System Diagnostics, Root-Cause Analysis, IT Troubleshooting, Preventive Maintenance, Hardware/Software Configuration.

Professional Skills: Analytical Problem-Solving, Business Communication, Technical Documentation, Cross-Functional Collaboration, Customer Service, Complaint Resolution.

Languages: English (Native), Melayu (Native)

WORK EXPERIENCE

Pusat Ekosistem Digital, Penetration Tester (6-Month Internship)

2026

- Uncovered 15+ critical system vulnerabilities across internal network architectures by conducting comprehensive risk assessments, reducing potential data exposure risks by 40% and strengthening overall network security posture.
- Orchestrated sophisticated real-world attack simulations (phishing campaigns, privilege escalation attempts) to rigorously evaluate defense mechanisms, resulting in the development of 5 incident response playbooks that streamlined containment and eradication procedures for the security team.
- Architected a standardized vulnerability documentation and risk reporting framework that unified team reporting practices, improving reporting consistency by 25% and accelerating patch deployment timelines from an average of 14 days to 10 days.

Penang Food Fantasy (PFF), Food Service Specialist

2014–2019

- Oversaw daily customer service operations during peak hours (12+ hours), de-escalating 50+ complaints per shift and maintaining a 98% customer satisfaction rating through rapid analytical problem-solving and calm conflict resolution.
- Diagnosed and rectified Point-of-Sale (POS) system malfunctions in real-time, achieving 99.9% system uptime during peak operational hours by implementing proactive system checks and performing rapid on-the-fly hardware/software repairs.
- Translated complex technical POS issues into clear, actionable language for non-technical restaurant management, bridging the communication gap between operations and IT support and demonstrating essential business communication and interpersonal skills.

SUKSIS Evaluation Management System, Full-Stack Developer (Final Year Project)

2025

- Designed and deployed a full-stack web application (Django/SQL) from the ground up to automate semester assessment tracking for 200+ students, applying advanced analytical thinking to architect robust data validation logic and database relationships.
- Eliminated a 30% margin of manual data entry errors through automated calculation algorithms and boosted administrative workflow efficiency by 40%, reducing semester result processing time from 5 business days to just 3 days.
- Developed comprehensive user guides and facilitated hands-on training sessions for 15 non-technical administrative staff members, ensuring 100% system adoption within the first week of deployment with zero post-launch support tickets.

EDUCATION

Universiti Malaysia Terengganu (UMT)

2021-2026

Bachelor's Degree in Computer Science with Maritime Informatics (Honours)

CGPA: 2.91

Kolej Professional MARA Beranang

2018-2020

Diploma in Computer Science

CGPA: 2.85

PROJECTS & SECURITY LABS

Hands-on Security Lab: Designed and configured a virtualized home lab environment with firewall rules (pfSense) and network segmentation. Deployed Wireshark for intrusion detection and traffic analysis, identifying malicious patterns to strengthen defensive strategies. Demonstrates proactive initiative and commitment to practical, hands-on cybersecurity learning.
